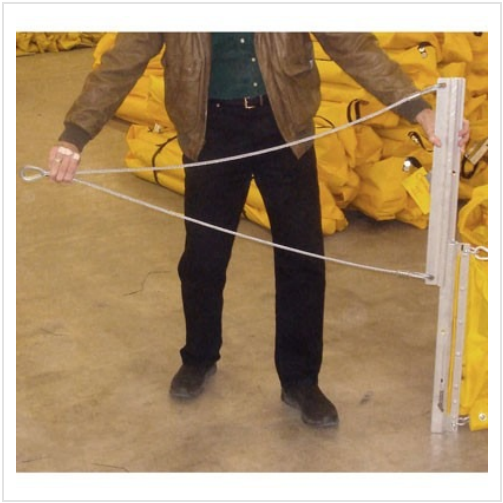
Tow Bridle for Spill Containment Boom



The Tow Bridle for Spill Containment Boom is the towing end for a floating containment boom: a tow bar slides onto the boom's end connector and locks with a toggle pin, and a two-leg wire rope bridle runs to a single eye for your tow line.

Because the bridle pulls from both the top and the bottom of the tow bar, the load is spread across the full height of the boom end instead of one corner. The boom tows upright, the skirt stays down, and the fabric and connector are not twisted or torn. The same bridle makes a strong tie-off or anchor point at the end of a deployed boom.

GOOD FOR

- Towing containment boom into place with a workboat
- Two-boat sweeps and U-shaped collection ahead of a skimmer
- Moving deployed boom as the tide and wind shift
- A tie-off or anchor point at the end of a boom run

SPECIFICATIONS

Design	Slide-on tow bar with a two-leg wire rope bridle to one tow eye
Fits	Containment booms with ASTM universal slide end connectors
Connection	Slides onto the boom end connector; locks with a toggle pin
Tow point	Eye at the front of the bridle for your tow line
Use	Towing boom, or as a tie-off / anchor point at the boom end
Item number (SKU)	C0540010A
